

Morphological Informality

The “Morphological Informality” sub-domain focuses on areas that are deprived of formal planning, lack infrastructure or have dense building arrangement and dense populations. This indicator will be used together with others to understand which areas are morphologically informal and help guide the development of policies and programmes for improving better access to infrastructure and services. Morphological informality will be divided into three classes: **HIGH, MEDIUM and LOW**. The definition for each of these categories is described below:

Buildings	Roads	Population
<p>High</p>  <p>this is an area with high density (density of at least 4,000 buildings per km²)</p>  <p>buildings are small and dense</p> <p>buildings are aligned differently to neighbouring structures</p>	 <p>paths and roads are narrow and unpaved</p>  <p>this is a path/road</p> <p>paved road density of at least 0.3 km per km²</p>	 <p>this is an area with high density (density of at least 5,000 people per ha)</p>
<p>Medium</p>  <p>this is an area with moderate density (density of at least 1,500 buildings per km²)</p>  <p>buildings are small and dense</p> <p>OR</p> <p>buildings are aligned differently to neighbouring structures</p>	 <p>There is a combination of paved and unpaved paths</p>  <p>paved road density of at least 0.76 km per km²</p>	 <p>this is an area with moderate density (density of at least 2,000 people per ha)</p>
<p>Low</p>  <p>this is an area with low density (density of at least 500 buildings per km²)</p>  <p>buildings are large, detached and formally arranged.</p>	 <p>paved road density of at least 1.25 km per km²</p>  <p>this is a path/road</p> <p>roads are paved and wide</p>	 <p>this is an area with low density (density of at least 500 people per ha)</p>
